

General description

The PLX26X00 model is a capacitive pushbutton composed of 8 independent touch areas, fully customizable and 8 LED indicators, with ability to select its brightness, in each of the touch areas. In addition, it includes thermostat and humidity sensor with calculation of the dew temperature.

Its touch areas allow the control of electric circuits on/off, light regulation, blind control, etc... of any KNX device.

In addition, it incorporates an arithmetic and logic unit (UAL) that allows programming complex logic operations, programming of timers, counters, etc.

Characteristics

- 8 LED indicators.
- 8 independent touch areas.
- 1 internal thermostat.
- 1 humidity sensor.
- Programmable inputs to work as switch or push buttons.
- Arithmetic and Logic Unit (ALU) that allows to program complex logic operations, timers programming, counters, etc. using internal or external variables.
- Cleaning and night programmable modes.

Technical information

Supply	29V _{DC} from KNX BUS
Consumption	10 mA from KNX BUS*
Mounting	Built-in on universal distribution box
Size	129 x 88 x 6 mm
Connections	Connection terminal KNX bus.
Touch areas	8 touch areas
LED indicators	8 LED indicators
Environment temperature range	Operation: -10°C a 55°C Storage: -30°C a 60°C Transportation: -30 °C a 60 °C
Regulation	According to the directives of electromagnetic compatibility and low voltage. EN 50090-2-2 / UNE-EN 61000-6-3:2007 / UNE-EN 61000-6-1:2007 / UNE-EN 61010-1

*Equivalent to 2 BUS devices (1 BUS device = 5 mA)

Installation

The device is installed hanging from the two parallel grooves on its rear. Two conical head screws are used in wall and/or universal mechanism box. It is VERY IMPORTANT that the screws head exceeds 1mm from the wall.

custom series
capriccio
Front glass
interchangeable

Exclusively in the capriccio custom series, the glass is fixed to the rear with a four magnets system that enables an easy exchange.

Remarks

Install low voltage lines (KNX bus and inputs) in a ducting separated from the power (230V) to ensure there is enough insulation and avoid interferences.

Do not connect the main voltages (230V) or any other external voltages to any point of the KNX bus.
